

FLYTBASE BRAND REFERENCE

Visual identity notes, pulled from lifeatflytbase.com
for use in the NestGen '26 scrollytelling build

WHAT'S INSIDE

1. Color palette (hex values)
2. Typography system
3. Illustration & imagery style
4. The unifying visual device
5. Voice & tone
6. How to apply this to NestGen

01 · COLOR PALETTE

CREAM BASE

#EDE8DA

Primary background – warm off-white with subtle dot-grid texture, never plain white

TERRACOTTA

#C96A35

Primary headline color – used for the main hero title

FOREST GREEN

#254A33

Secondary headline color – used on cream and mustard backgrounds

MUSTARD GOLD

#E4B12A

Dominant accent – full-bleed section backgrounds, every CTA button

SKY BLUE

#4A93C4

Tertiary accent – one of several flat colors in the culture-values card grid

INK / DARK BROWN

#2A1F16

Body text + universal border color – never pure black

02 · TYPOGRAPHY

LIFE AT FLYTBASE

WE'RE HIRING PEOPLE WHO BUILD

Hard problems, meaningful work.

HEADLINE / DISPLAY

Pixel / 8-bit monospace font, always set in ALL CAPS.

Used for every headline, nav item, and button label on the site.

Approximated here with DejaVu Sans Mono Bold – for the real

build, use an actual pixel font: 'Press Start 2P' or 'VT323'

(both free on Google Fonts) get much closer to the real retro-game feel than a standard monospace.

LOGOTYPE – THE ONE EXCEPTION

The 'flytbase' wordmark itself is set in a clean, modern lowercase sans-serif – a deliberate contrast to the playful pixel headlines.

Reading as: 'serious product, playful culture.'

BODY TEXT

Same monospace family, regular weight, sentence case – not caps.

Generous line-height. Short paragraphs, never dense blocks.

03 · IMAGERY & THE UNIFYING DEVICE

THREE IMAGE STYLES, DELIBERATELY MIXED

Pixel-art illustration

SNES / Stardew-Valley-style scenes for culture moments – a person with a drone on a rooftop, an isometric office, a team huddle.

Stylized 3D renders

Isometric low-poly renders for concept/product visuals – e.g. the 'Industrial Sites' illustration, cleaner and more literal than the pixel art.

Real team photos

Actual photos treated like scattered polaroids – white border, slight rotation, casual framing (the 'Flyter Travels' section).

THE UNIFYING DEVICE

Thick dark-brown/ink borders + hard-edged drop shadows on every single image, card, and button – no soft shadows, no gradients (besides the logo mark), no rounded corners anywhere.

This is what makes pixel art, 3D renders, and real photos all feel like they belong to the same 'game cartridge' system, despite being three very different visual media.

04 · VOICE & APPLYING THIS TO NESTGEN

VOICE & TONE

Confident, informal, a little cheeky for a deep-tech industrial company.

Real examples straight off the site:

"Hard problems, meaningful work."

"Darr Ke Aage Jeet Hai" (Hindi film reference, used as a value name)

"Vibe checks > performance reviews."

Short, punchy lines. Never corporate-deck language, even when the underlying subject (industrial autonomy, enterprise software) is serious.

HOW TO APPLY THIS TO YOUR NESTGEN SITE

Your current scaffold uses a moody navy/amber cinematic palette – a different register than FlytBase's bright, flat, retro-game look. To feel like a genuine FlytBase sub-brand rather than a generic AI site:

1. Swap to flat mustard / cream / terracotta / forest green
2. Add thick ink borders + hard shadows to every card and image
3. Set headlines in a pixel font (Press Start 2P / VT323), all caps
4. Keep body text in the same mono family, sentence case
5. Keep your sky-progress scroll idea – just reskin its palette

to match the mustard/cream system instead of navy/amber
